EXPERIENCE

- Bridges AI Consulting** – *Co-Founder, CTO & Lead AI Engineering Consultant* Dec. 2025 – Present
- Led technical consulting engagements designing and deploying **end-to-end AI platforms** for large-scale ingestion, transformation, and understanding of unstructured data — from client scoping through production deployment.
 - Designed and built a **GPT-4o**-powered content generation pipeline with multi-step prompt chaining and automated publish workflows, extracting structured outputs from unstructured inputs across **FastAPI** and **Next.js** services.
 - Architected an AI EdTech platform converting LMS content into faculty-reviewed video lectures via **Anthropic Claude**; deployed on **Cloudflare Workers** with **D1** edge storage and production-oriented workflow controls.
 - Built an ML platform across **3M+ property records** using **LightGBM/XGBoost**, computer vision (**YOLOv11 + CLIP**), and **PyTorch** models trained on local GPU; backed by a scalable **13-service** backend on **AWS ECS Fargate** with **PostgreSQL + PostGIS**.
- M Science (Jefferies)** – *Quantitative Equity Research Associate — Industrials* Oct. 2022 – Aug. 2023
- Sourced and processed **alternative datasets** (satellite imagery, job postings, point-of-sale transactions) alongside company fundamentals in **SQL/Python** to surface early equity signals.
 - Engineered predictive equity models in **PySpark/Databricks**, using **millions of transactions & job postings**.
 - Produced **10+ research reports** and automated workflows with **FactSet/REST APIs**, cutting reporting effort by **20%** and reducing cycles from **quarterly to monthly**.
- Goodfill** – *Backend Software Engineer Consultant* Jul. 2022 – Oct. 2022
- Delivered investor onboarding in **Python** with FINRA API and deployed backend services in **Go/AWS Lambda/SQS/SNS**; integrated apps with **IB Gateway & TWS APIs** in Docker.
- PerceiveNow** – *Data Analyst* Jul. 2022 – Oct. 2022
- Implemented **HuggingFace NLP (AI) models** on **AWS Lambda** to process **50k+ research articles** with improved accuracy.
 - Streamlined Python REST pipelines, cutting reporting from **minutes to seconds** and reducing costs by **12%**.
- Citco** – *Risk Analysis Intern* May 2022 – Jul. 2022
- Automated AIFMD/Form PF reporting for **20+ hedge funds** with VBA/SQL/PySpark and maintained risk models in **Python/SQL** supporting **\$10B+ AUM**.
- Advanced Micro Devices (AMD)** – *Yield Analysis Intern* Jan. 2022 – May 2022
- Researched a **nearest-neighbor anomaly detection algorithm** in **Python/SQL** on **100k+ wafer samples**; visualized results in **Jupyter** to help engineers evaluate ML feasibility tradeoffs.
- *Product Development Intern* Aug. 2021 – Dec. 2021
- Automated real-time failure detection and alerting with **pandas/SciPy**, ingesting data from **12 sources** via **Snowflake**; reduced lab issue resolution time for engineering management.
- BNY Mellon** – *Summer Data Analyst — Liquidity & Margin* Jun. 2021 – Aug. 2021
- Built Python/Tableau dashboards used by **3+ business units** to monitor liquidity across **hundreds of accounts**, reducing reconciliation time by **20%**.

EDUCATION

- University of Colorado Boulder** – *M.S. Data Science – GPA: 3.88* 2023 – August 2026
- Coursework: Deep Learning, Parallel Computing, GLMs, Regression & Classification, Trees & SVMs
- University of Texas at Austin** – *B.S. Mathematics* 2018 – 2022

PROJECTS

- Robotics ML Research (UT Austin – BWI Project)** Aug. 2019 – Dec. 2020
- Trained a feature network for **DeepSORT tracking** with Google's Triplet Loss, improving accuracy by **8%**.
 - Developed an autonomy stack in **Python, C++, ROS** for robotic navigation; recognized with the **UT CNS Undergrad Research Award**.

SKILLS

Programming & Systems: Python, SQL, Go, C++, R, FastAPI, Docker, AWS (Lambda, ECS, SQS), Terraform, Git
Machine Learning: PyTorch, LightGBM, XGBoost, scikit-learn, HuggingFace, YOLOv11, CLIP, TensorFlow
Data & AI: PySpark, Databricks, PostgreSQL/PostGIS, LLM APIs (Claude, GPT-4o), n8n, Redis, Tableau
